T-019543

Mayaro virus (MAYV) is an emerging mosquito-transmitted alphavirus. This is a panel of 18 neutralizing mAbs against MAYV, 11 of which have activity that inhibited infection with EC_{50} values $<10\text{ng/ml}$.

Earnest, J. T., Basore, K., Roy, V., Bailey, A. L., Wang, D., Alter, G., ... & Diamond, M. S. (2019). [Neutralizing antibodies against Mayaro virus require Fc effector functions for protective activity](#). *Journal of Experimental Medicine*, 216(10), 2282-2301.
