

TWO COLOR HRAS AND SINGLE COLOR CD86 PLASMIDS

[Foust, Daniel, Piston, David](#)

[Poranki, Deepika](#)

T-019195

New combinations of labeled membrane proteins and G-protein subunits. These include twocolor HRas and single color CD86 controls as well as labels beta and gamma subunits of the heterotrimeric G-protein complex. All of these have been built using plasmids from Addgene.
